Course Syllabus — Introduction to Web Technologies

Course overview

This sample syllabus is the file referenced by the "download link" example on the Hyperlinks tutorial page. It exists so that clicking the example's download button in this project actually downloads a real PDF, instead of pointing at a file that doesn't exist.

Modules covered

Document structure & semantics, text and lists, links and navigation, images and media, tables, forms and validation, the HTML5 canvas/video/audio elements, accessibility, and a capstone project.

Replace this file

Swap this PDF out for your real course syllabus at any time — just keep the same filename (files/syllabus.pdf) or update the href in the tutorial data if you rename it.
